

TEMPUS.MOTU GROUP (TMG)

Policy, Society and Technology Research Services

TMG solves fast-changing policy, societal and technological challenges facing local/national authorities and policymakers. We design, implement and scale strategic opportunities and novel tactical options that tackle long-term systemic, systematic impact and transformational change.

Comprised of a global team of interdisciplinary thought leaders, along-side a network of senior advisors, TMG combines theory, methodology and execution strategies to create a clear image of complex systems and help you to think, execute and rethink your approach to the innovation models required for the coming technological, societal, and environmental revolution and its inevitable effects on society.

How we work

- We identify unknowns and define the questions around which leaders can formulate a desired vision of the future.
- To make it happen, we will design a set of structural experiments in various domains to better map ideas, relationships, and constraints to best tackle the upcoming challenges.
- Then we will develop strategies and collaboration models to realize this future and implement the necessary tools and processes to deliver on the desired vision.

Services

We offer a wide range of services across all sectors.

- Systematic studies and benchmarking
- Crisis management strategies
- Communication and PR
- Social impact and sustainability research
- Policy frameworks and business transformation
- Technology assessment and development

Focus areas

- Automation and Fast-tracking (Digital Twins, energy, logistics, communication)
- Social Interactions and Behaviours
- Economic Models
- Research & Development
- Education and innovation
